

Simple and safe needle removal with your Sharpak Zero sharps container

Used needles can pose a real danger if not disposed of properly, they must not be bent or broken and never re-used

To remove the needle from a syringe, simply insert the needle into one of the indented openings in the mouth of the sharps bin container, pull back gently to clip off the needle which will fall directly into the bin. Never attempt to touch the needle

Close the bin by rotating the lid clockwise to the first closure position
